

ReNew Power commissions Gujarat's first wind-solar hybrid project

- 17.6 MW captive project established to supply clean energy at Vilayat tehsil in Bharuch district
- Second phase will see an additional installation of 16.68 MW for the same unit
- Project is expected to mitigate total of ~150,000 tCO₂e (carbon) emissions each year

Gurugram, Haryana, India, Feb 08, 2022: ReNew Power ("ReNew") (NASDAQ: RNW, RNWWW), India's leading renewable energy company, today announced that it had set up Gujarat's first wind-solar hybrid project at the Chlor-Alkali unit of Grasim Industries Limited in Vilayat, Bharuch, in southern Gujarat.

The first phase of the hybrid project, with 17.6 MW commercial-scale wind-solar, commenced operations last week and is expected to generate ~80 million units of renewable energy every year, mitigating ~75,000 tCO₂e (carbon emissions) annually.

The partnership will expand further with an additional 16.68 MW, which will be commissioned in the next financial year (FY23), as part of the second phase. The project is being developed by ReNew Green Solutions (RGS), the B2B arm of ReNew Power. Both the parties have entered into a 25-year PPA, which will see the project supply power for the plant at Vilayat, Bharuch, via an Open Access mechanism.

Once both phases are commissioned with a combined capacity of 34.28 MW, the partnership is expected to generate a total of approximately 160 million units of renewable electricity annually, mitigating a cumulative ~150,000 tCO₂e (carbon emission) a year (source: tCO₂e value calculated as per CEA database version 16).

Both phases together have a total investment of INR ~3.82 billion (~\$51 million) through an equity partnership.

Speaking on the project, **Mr. Mayank Bansal, Chief Commercial Officer, ReNew Power, said:** "As India strives to achieve net zero by 2070, largescale adoption of renewables by corporate India is key.

With corporates increasingly harnessing renewable energy, ReNew aims to develop around 250 MW of wind-solar hybrid projects in Gujarat for commercial & industrial consumers, like we have just done at Vilayat, Bharuch," added Bansal.

Gujarat is one of the states that has aggressively supported corporate adoption of clean energy. It notified its solar policy in 2009 and was the first state to announce a hybrid policy in 2018. It has made hybrid plants attractive for investments by corporates by providing incentives such as a waiver on electricity duty and creating an enabling environment for corporates to tie up with renewable energy leaders like ReNew to meet captive power requirements. Hybrid projects offer higher energy for a given capacity (i.e., more units/MW), compared to standalone solar or wind projects, and help overcome any variability in renewable energy power supply.

About ReNew Power: ReNew is one of the largest renewable energy Independent Power Producers (IPPs) in India and globally. ReNew develops, builds, owns, and operates utility-scale wind and solar energy projects, hydro projects and distributed solar energy projects. As of December 31, 2021, ReNew had a total capacity of approximately 10.2 GW of renewable energy projects across India including commissioned and committed

projects. For more information, please visit: www.renewpower.in; Follow ReNew Power on Twitter @ReNew_Power.

ReNew Green Solutions (RGS) is the B2B unit of ReNew Power. RGS has the experience of commissioning & maintaining ~1 GW of RE installations across India for C&I segment. Please visit <https://renewpower.in/business-to-business-solutions-for-corporate-ppa/> for more information.
